------------	--------------

During the international phase, the application was identified as relating to three non-unitary inventions, relating to the solid forms of the compounds of formula (I) (invention-1), to the process to prepare intermediate (J) via intermediate (L) (invention-2) and to the process to prepare intermediate (N) (invention-3). No additional search fees were paid, so the Written Opinion of the International Searching Authority was based on Invention-1 only.

With the letter dated 27.04.2020, the applicant submitted new claims based on original claims 33, 34, 39 and 40. Said subject-matter belongs to invention-2 as identified in the International search phase and has not been searched. The applicant did not provide any argument to overcome the non-unity objection and the Examining Division agrees with the finding of lack of unity of the invention for the reasons given in the Written Opinion of the International Searching Authority.

In accordance with Rule 164(2)(a) EPC the applicant is herewith invited to pay one additional search fee for the claimed invention that has not been searched yet by the EPO in its capacity as ISA, but should be covered by the search results under Rule 164(2)(b) EPC within the (non-extendable) period of two months. If the applicant does not pay any further search fee under Rule 164(2) EPC, the application should be limited to the invention-1 covered by the international search report (Rule 164(2)(c) EPC).
