

The examination is being carried out on the **following application documents**

Description, Pages

1-200 as published

Claims, Numbers

1-22 received on 17-07-2021 with letter of 17-07-2021

1. Amendments

The amendments as filed with letter of 17.07.2021 are admissible under Art. 123 (2) EPC: Claims 1 and 7 have been amended by specifying that R₃ is methyl, or ethyl, wherein the methyl or ethyl is optionally substituted with one or more R₇ based on original claims 28-29 and at original paragraphs [0175] to [0178] and [0241].

2. Novelty and inventive step have already been acknowledged.

3. Before a patent may be granted the Applicant is asked to adapt the description carefully to the new set of claims on file and to delete any subject matter from the description no longer being comprised by main claim 1. It is brought to the Applicant's attention that any amendments made in response to this communication should strictly meet the requirements of Art. 123 (2) EPC. In this context the Applicant is kindly referred to the Guidelines of 2021, F-IV.4 and F-IV.6 and to the Decision of the Boards of Appeal T1808/06 (headnote and point 2 of the reasons):

"In order to meet the requirement of Article 84 EPC that the claims have to be supported by the description, the adaptation of the description to amended claims must be performed carefully in order to avoid inconsistencies between the claims and the description/drawings which could render the scope of the claims unclear. Any disclosure in the description and/or drawings inconsistent with the amended subject-matter should normally be excised. Reference to embodiments no longer covered by amended claims must be deleted, unless these embodiments can reasonably be considered to be useful for highlighting specific aspects of the amended subject-matter. In such a case, the fact that an embodiment is not covered by the claims must be prominently stated. The placing of reliance on Article 69(1) EPC, as was done in the decision under appeal, is not an appropriate justification for a less stringent adaptation of the description."
